

How to Configure Your Bitcoin Wallet with SharedHaven

Step 1: Set Up a PIN and Choose Your Language

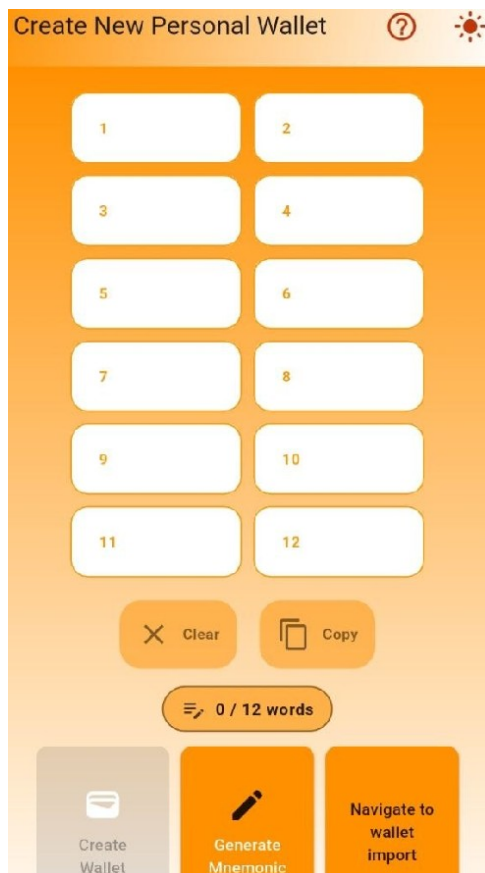

You can also use testnet for testing purposes (the screen turns green).

You will need your PIN again in the future to access the app.

Step 2: Create Your Personal Wallet

To create a Bitcoin wallet you need to generate a MNEMONIC of 12 English words.

Write those 12 words on a piece of paper, away from the digital world. **NO screenshots, NO copy-paste:** they can be stolen by other apps. Keep your piece of paper in a safe place!

YOU NEED THOSE 12 WORDS TO RECOVER YOUR FUNDS even if your phone is stolen or broken — you can restore your wallet on another device.

Those 12 words ARE the key to recover your money!

Steps for creating your mnemonic:

- Press the "Generate Mnemonic" button at the bottom center of the screen (the generated words will appear).
- Write them on paper!
- Press the "Create Wallet" button at the bottom left of the screen.
- A short test will appear to verify that you wrote the words correctly.

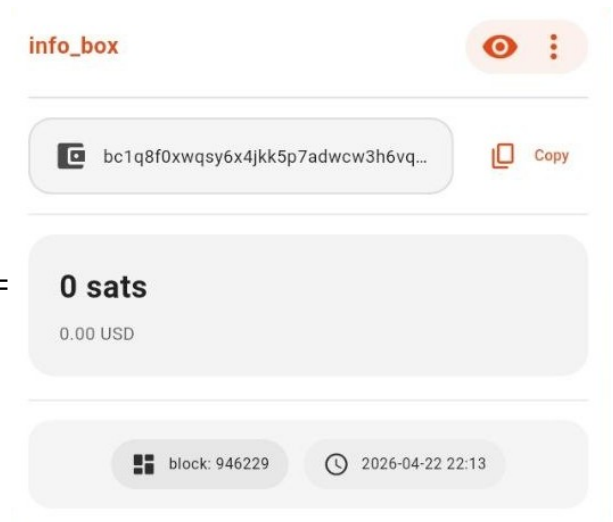

If you already have your 12 words and want to restore an existing wallet, press **"Navigate to Wallet Import"** and enter your 12 words to recover your wallet.

Congratulations! Bitcoin Wallet created!

Now you are your own bank!

You will see:

- Your address to receive bitcoin (the one that starts with bc1...)
- Your balance in bitcoin (sats) — 1 bitcoin = 100,000,000 sats
- The current blockchain block and date

Refresh the Balance

If you "slide down", the app will check the blockchain status and update your balance.

Please note that a new block is added to the blockchain approximately every 10 minutes. There is no need to refresh more frequently.

Receive Bitcoin

You can give your bitcoin address (bc1...) to whoever wants to send you bitcoin.

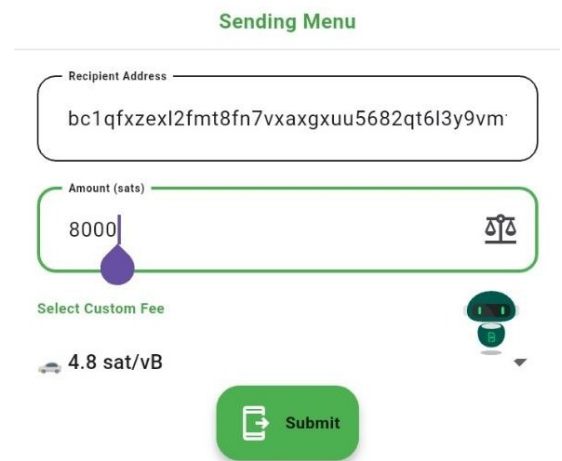

When they send it through the bitcoin network, you will see the received amount reflected in your balance.

Send Bitcoin

Press the button with the ARROW at the bottom of the screen, then:

- Enter the RECIPIENT ADDRESS provided by the other party.
- Enter the amount you want to send.
- Press "Submit".

(In the amount field there is also an icon to calculate the maximum spendable amount.)

About SharedHaven

You are using the Bitcoin network — a payment system not controlled by anyone, usable by everyone.

- There are no intermediaries.
- There is no central authority; no one can censor or seize your funds.
- You are your own bank.

Don't lose your 12 words, or you will lose your funds.

SharedHaven Wallet Team

CHAPTER 2 - Shared Accounts

For inheritance, multi-party payments, and more.

A Shared account is created between multiple keys.

Let's use this example: Inheritance example 1.

There are three persons:

FATHER (with many bitcoins), **WIFE** and **SON**.

The FATHER chooses to create the shared account with wife and son with this rules:

RULE 1 - he can always spend from the shared account (with his 'father' key)

RULE 2- **after a year** that the funds aren't moved, son and wife can cooperate to spend them (**they need to do that together**)

RULE 3 – after **a year and 2 weeks** that the funds aren't moved son and wife can spend from the shared account, but everyone **can do that alone**.

STEP 1 - Everyone of the three install the SHAREDHAVEN app and create his own personal wallet as we saw in chapter 1.

They don't share their mnemonics of 12 words, everyone keeps it safe secretly.

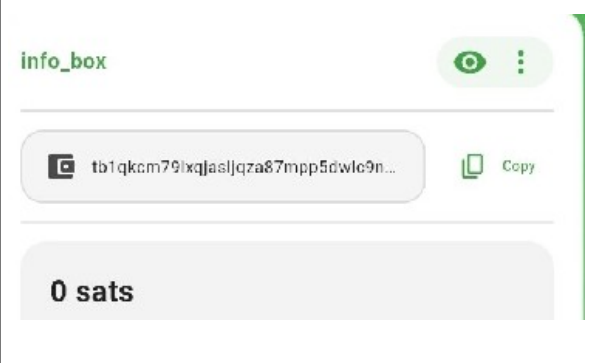

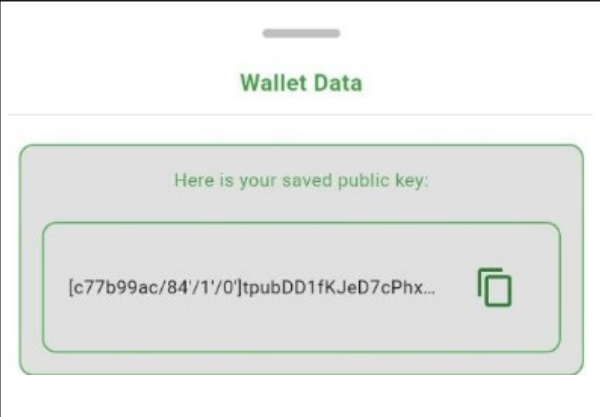

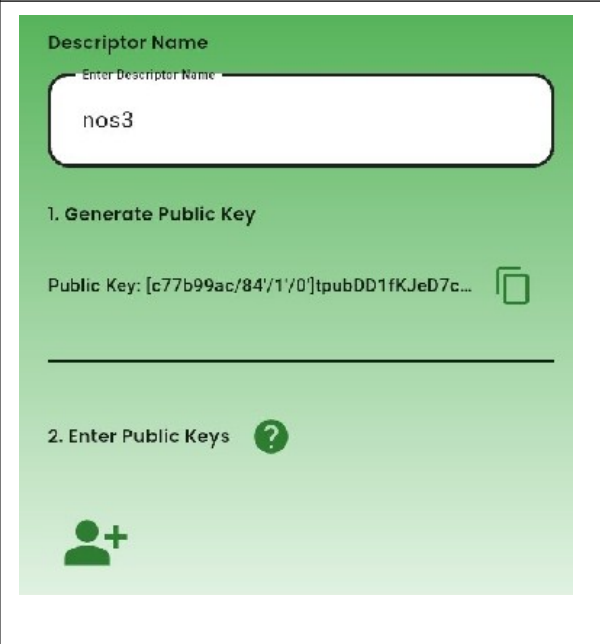

STEP 2 – Everyone SHARE his Public Key (pressing the three points in the right upper part of the screen of the personale wallet) sending that to the FATHER

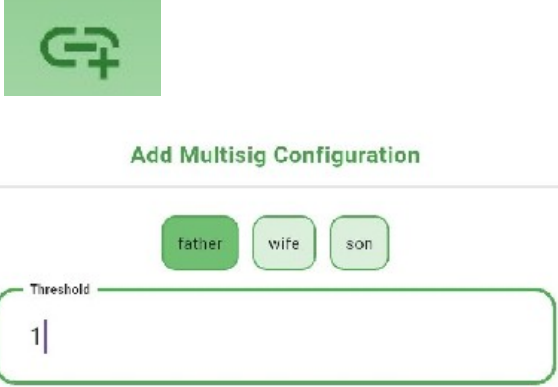

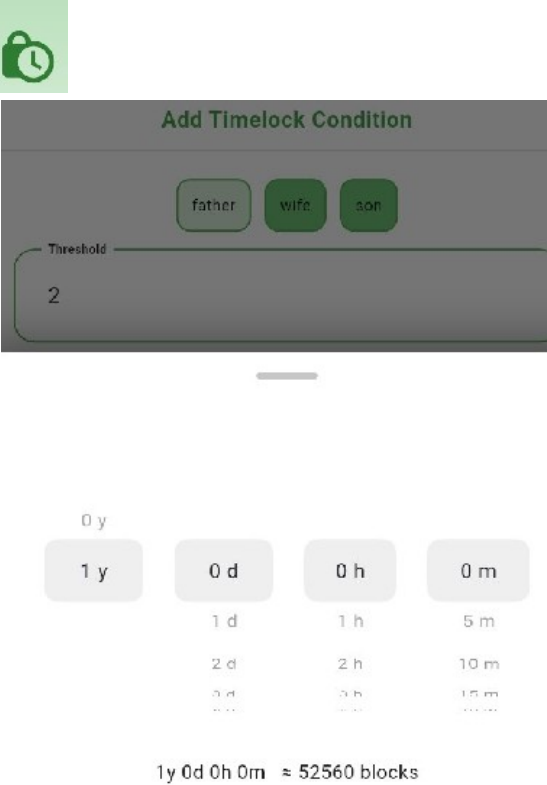

STEP 3 - the FATHER creates a SHARED ACCOUNT made with the three KEYS and the RULES

STEP 4 – the Father shares the created shared account (called DESCRIPTOR of the shared account) with SON and WIFE

STEP 5 – wife and son import the shared account file

STEP 6 – everyone sees the balance of the SHARED ACCOUNT. Everyone stores his own 12-words mnemonics AND the shared account file to recover the funds.

STEP 1 – after the creation of the personal account (see chapter 1), press the three vertical dots in the upper right corner.	 The screenshot shows a green header with 'info_box' and a toggle switch. Below is a text box containing a public key starting with 'tb1qkcm79ixqjasljqza87mpp5dwc9n...' and a 'Copy' button to its right.
It will appear a box with the public key. STEP 2 - Use the button to COPY your public key to the others (in example to FATHER). PASTE and SEND the public key via whatsapp, telegram, email or others apps to the one who will create the shared account.	 The screenshot shows a green header with 'Wallet Data'. Below is a box with the text 'Here is your saved public key:' and a public key starting with '[c77b99ac/84/1/0]tpubDD1fKJeD7cPhx...' next to a copy icon.
STEP 3.1 - Creation of the SHARED WALLET. The Father press the upper left button with three horizontal lines to enter the menu to see his accounts and to press the button “CREATE SHARED WALLET” He will: - give a name to the shared wallet (for example: “nos3”) - copy his public key shown there	 The screenshot shows a green interface with a 'Descriptor Name' field containing 'nos3'. Below is a section '1. Generate Public Key' showing a public key starting with '[c77b99ac/84/1/0]tpubDD1fKJeD7c...' and a copy icon. At the bottom, there is a section '2. Enter Public Keys' with a question mark icon and a person icon with a plus sign.
STEP 3.2 - Adding all the KEYS - press the “man with a +” button to ADD his public key to the shared wallet. This will show up a box with a place where - to PASTE the public key and a name of the key/owner. For example FATHER.	 The screenshot shows a green interface with a header 'Edit Public Key'. Below are two input fields: 'Enter Public Key' containing '[ec3dcf15/84/1/0]tpubDCrvwWthgXJVt63ot' and 'Enter Alias Name' containing 'wife'.

he will repeat the operation pressing the “man with a +” button to ADD all the others public keys received from the others (for example, WIFE AND SON).	
STEP 3.3 – ENTER THE RULE (who) that can spend immediately. Press the step 3 button and: - Select the keys that can spend. In our example let's press only on FATHER and let's put “1” in the threshold box. This means that HE IN HIS “1” ONLY PERSON can immediately spend the coins. Save the operation.	
STEP 3.4 – TIMELOCK CONDITIONS. Press the step 4 button. SELECT WHO can spend (in our example press son AND wife) and put “2” in the threshold box. This means that they need to be “2”, BOTH necessary to send the transaction. (no one of them can spend alone). and SELECT WHEN they can spend clicking on “older”. A time selection will appear. In our example we will choose 1y (1 year = 52560 blockchain blocks). Press ADD and the rule will be saved. Recap: we added the rule that two selected keys: SON and WIFE are BOTH “2 of 2” needed to spend when it's passed 1 year after the money arrival.	
STEP 3.4 can be repeated many times to insert various TIMELOCK conditions.	

In our example, father choosed that if SON and WIFE can't cooperate in spending after one year (for example becouse one of them have lost the key), after another two week it's only needed 1 of their key to spend.

The RULE will be creted in this way:

- add locktime rule
- choose son and wife keys
- put "1" in the thresold, so that you only need "1" of their 2 keys to spend after that time
- select 1year, 14 days (2 week later then previous rule)

two locktime rules are created.

YOU CAN PRESS CREATE DESCRIPTOR

to CREATE the shared wallet

STEP 4 – Father will DOWNLOAD THE DESCRIPTOR .

Saving a file on his device.

This FILE is VERY IMPORTANT and must be SENT to WIFE and SON. They will need it.

Press "NAVIGATE TO WALLET" to finalize the creation of the SHARED WALLET.

A bitcoin address will appear. It's the bitcoin address of the shared account where you can send your bitcoins.

Note: if you did not save the descriptor

3. Enter Multisig Policy ?

Threshold: 1

father

4. Enter Timelock Conditions ?

Threshold: 2

Older: 52560

After:

Public Keys: wife, son

Threshold: 1

Older: 54582

After:

Public Keys: son, wife

5. Create Descriptor ?

Create Descriptor

Address

file, you can find it pressing the three vertical dots button in the upper right part of the screen to find again the “download descriptor” option. YOU NEED THE DESCRIPTOR AND YOUR 12-words mnemonic to recover the funds in case of lost device.	
STEP 5 – Wife and Son IMPORT the descriptor file. On the wife and son mobiles, they have to: - receive and save the descriptor file - press the upper left button tih the three horizontal lines to enter the menu to create import a shared wallet - press import shared walle - select the descriptor file from the device - press import	Manage your shared Bitcoin wallets with ease! Whether creating a new wallet or importing an existing one, we've got you covered.  Create Shared Wallet  Import Shared Wallet
STEP 6 – Everyone one has the same balance in the shared account. We sent 80.000 satoshi (0.00080000 bitcoins) to the wallet. Not everybody can immediately SPEND from the shared account. There is a box in the midlle of the screen. This box shows the amount that can be spent. Press the three dots in the box to see a recap of the time remaining to spend.	MULTISIG Threshold: 1 father Transaction Info: 80000 can be spent! Relative Timelock: 52560 Blocks Threshold: 2 son, wife Transaction Info: Value: 80000 Time Remaining: 12 months, 4 days, 23 hours, 50 minutes Blocks Remaining: 52559 Relative Timelock: 54582 Blocks Threshold: 1 son, wife Transaction Info: Value: 80000 Time Remaining: 1 year, 14 days, 50 minutes Blocks Remaining: 54581

CHAPTER 2.2 - Spending from the Shared Accounts

In the balance screen, there is a second box like this one.

The Father will see that: - can spend immediately - he can do that alone (1/1) - the right arrow (the “spend icon”) is active	
The Son and Wife will see that: - can spend in ~ 12 months and not now - that they will need to be in 2 to spend (2/2) - the spend icon is not active	
The son and wife will also see another “spending path”. This one. - they have to wait 12 months and 2 weeks - each of them can spend alone (1 / 2) - the spend icon is still not active	

If you can spend ALONE:

- press the spending icon
- insert the recipient address
- insert the amount or press the “max spendable” button

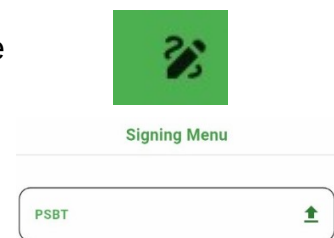

If you can spend WITH OTHERS:

STEP A – one of them creates the transaction

- press the spending icon
- insert the recipient address
- insert the amount or press the “max spendable” button
- share the resulting Partially Signed Bitcoin Transaction (PSBT) with the others parts of the party that have to co-sign the transaction.

STEP B –

- The co-signer receives the PSBT and saves on the mobile
- the co-signer press the ‘co sign button’ in the right bottom of the main screen in the shared account
- the co-signer select the icon on the right and select the psbt file received from the first signers
- the transaction proposed by previous signers is displayed: the co-signer must CONTROL the amount and the destination address to check that everything is correct.
He also see who has already signed the transaction
- pressing the button to co-sign the transaction will co-sign the transaction and if the requested number of signatures is enough, the transaction is sent to the bitcoin network

In our example after one year WIFE can spend the money WITH son.

So She creates the transaction, saves the PSBT file and send that file to the son. He recover the partial transaction from the file, check that is ok, and co-sign the transaction.

(the manual will be continued with explanation of extra features of this app and with other examples os use of the shared accounts).

Hanny and the Shared Heaven team.
